Introduction

GD&T Builder is a powerful application designed to create and manage Geometric Dimensioning and Tolerancing symbols and annotations. This tutorial will guide you through all features and functionality of the application.

Getting Started

Installation

1. Download the GD&T Builder application
2. Run the installer or executable file
3. The application will automatically install required fonts and create necessary configuration files

Interface Overview

The application consists of four main tabs:

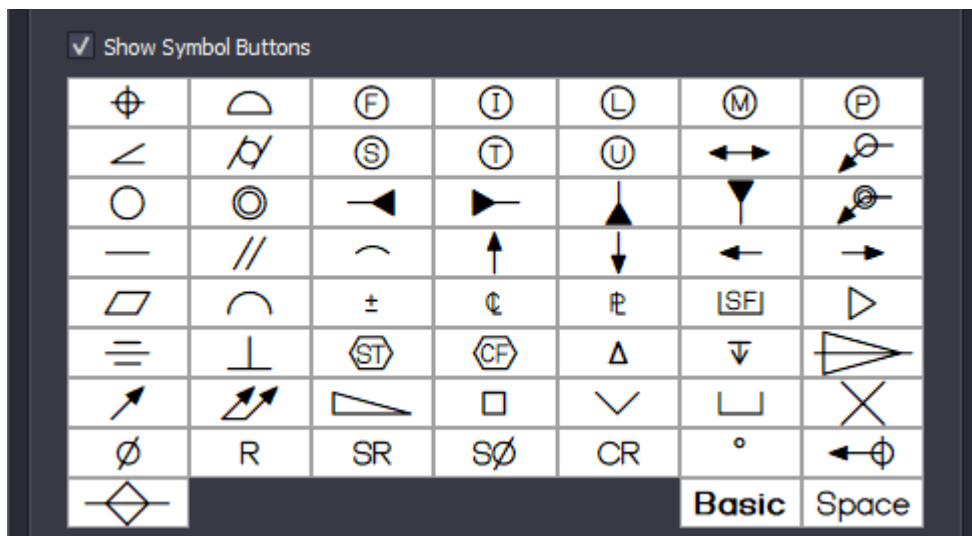

- Main Tab: Primary GD&T symbol creation and editing
- Datum Target Tab: Specialized datum target symbol creation
- Surface Finish Tab: Surface finish symbol creation
- Saved Configurations Tab: Library of saved GD&T configurations

Main Tab

Symbol Buttons

The Main tab features a comprehensive set of GD&T symbol buttons organized in a grid layout. These can be toggled using the "Show Symbol Buttons" checkbox or Ctrl+B shortcut.

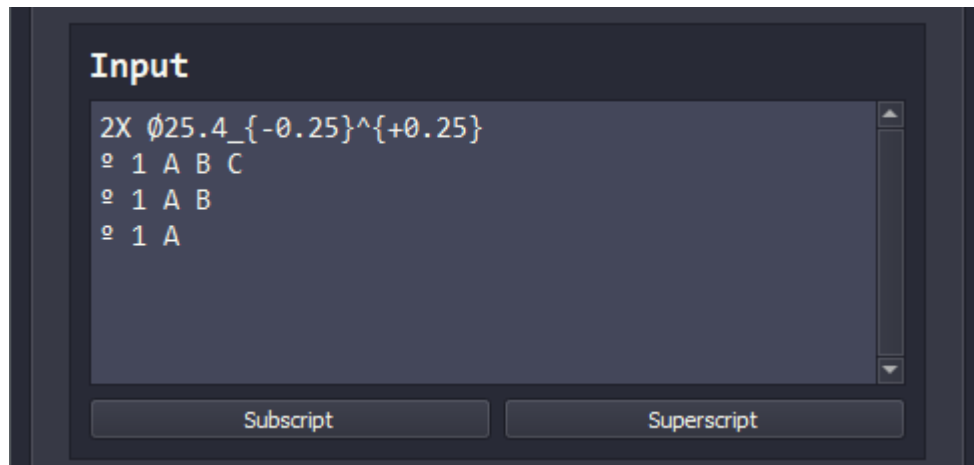

Key features:

- Click any symbol to insert it at the cursor position
- Hover over symbols to see their descriptions
- Basic and Space buttons are always available at the bottom

Text Input

The text input area supports:

- Regular text entry
- Symbol shortcuts (e.g., 'pos' for Position symbol)
- Subscript/Superscript text using the dedicated buttons
- Multi-line input

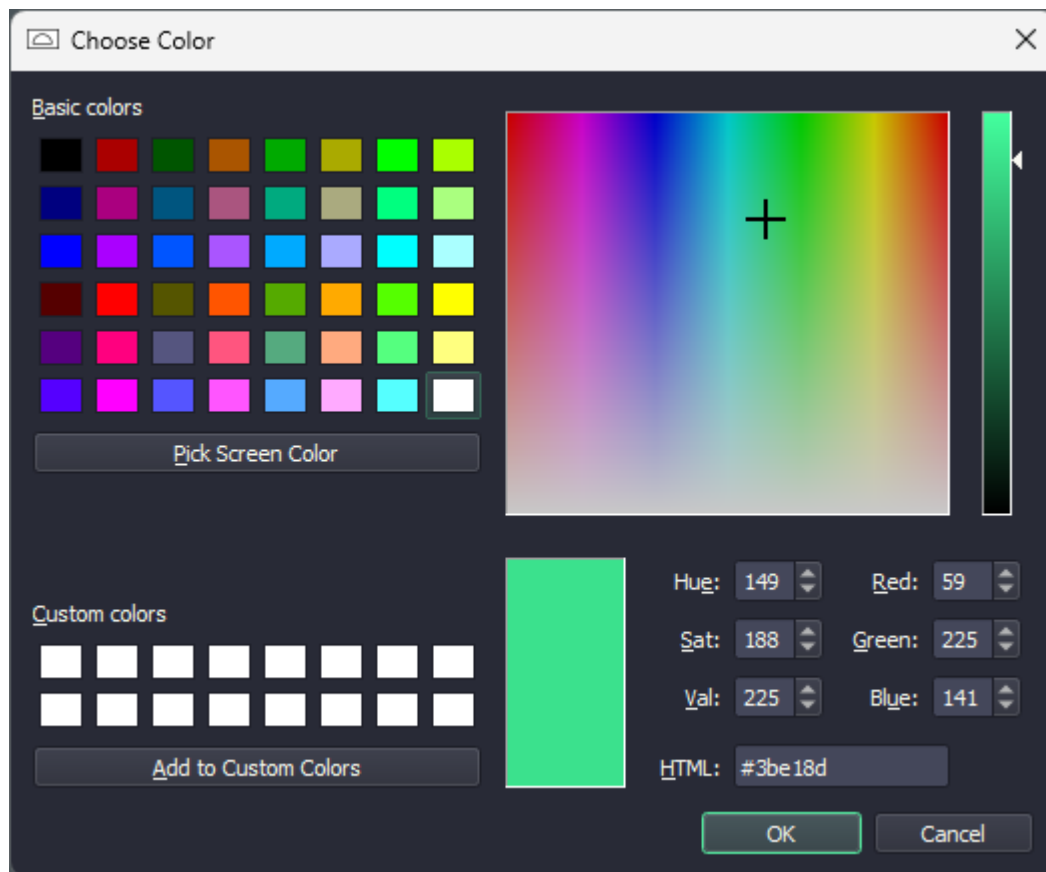

Color Controls

Color controls allow you to customize the appearance of your GD&T symbols:

- Change Color: Select custom colors for symbols
- Color Lines Only: Apply color only to symbol lines
- Color Fill: Fill symbols with selected color
- Fill Boxes: Automatically fill symbol boxes

Preview Window

The preview window shows a real-time preview of your GD&T configuration:

- Use Ctrl+Mouse Wheel to zoom in/out
- Preview updates automatically as you type
- Shows exact representation of what will be copied

Input

2X Ø25.4_{-0.25}^{+0.25}

◻ 1 A B C

Datum Target Tab

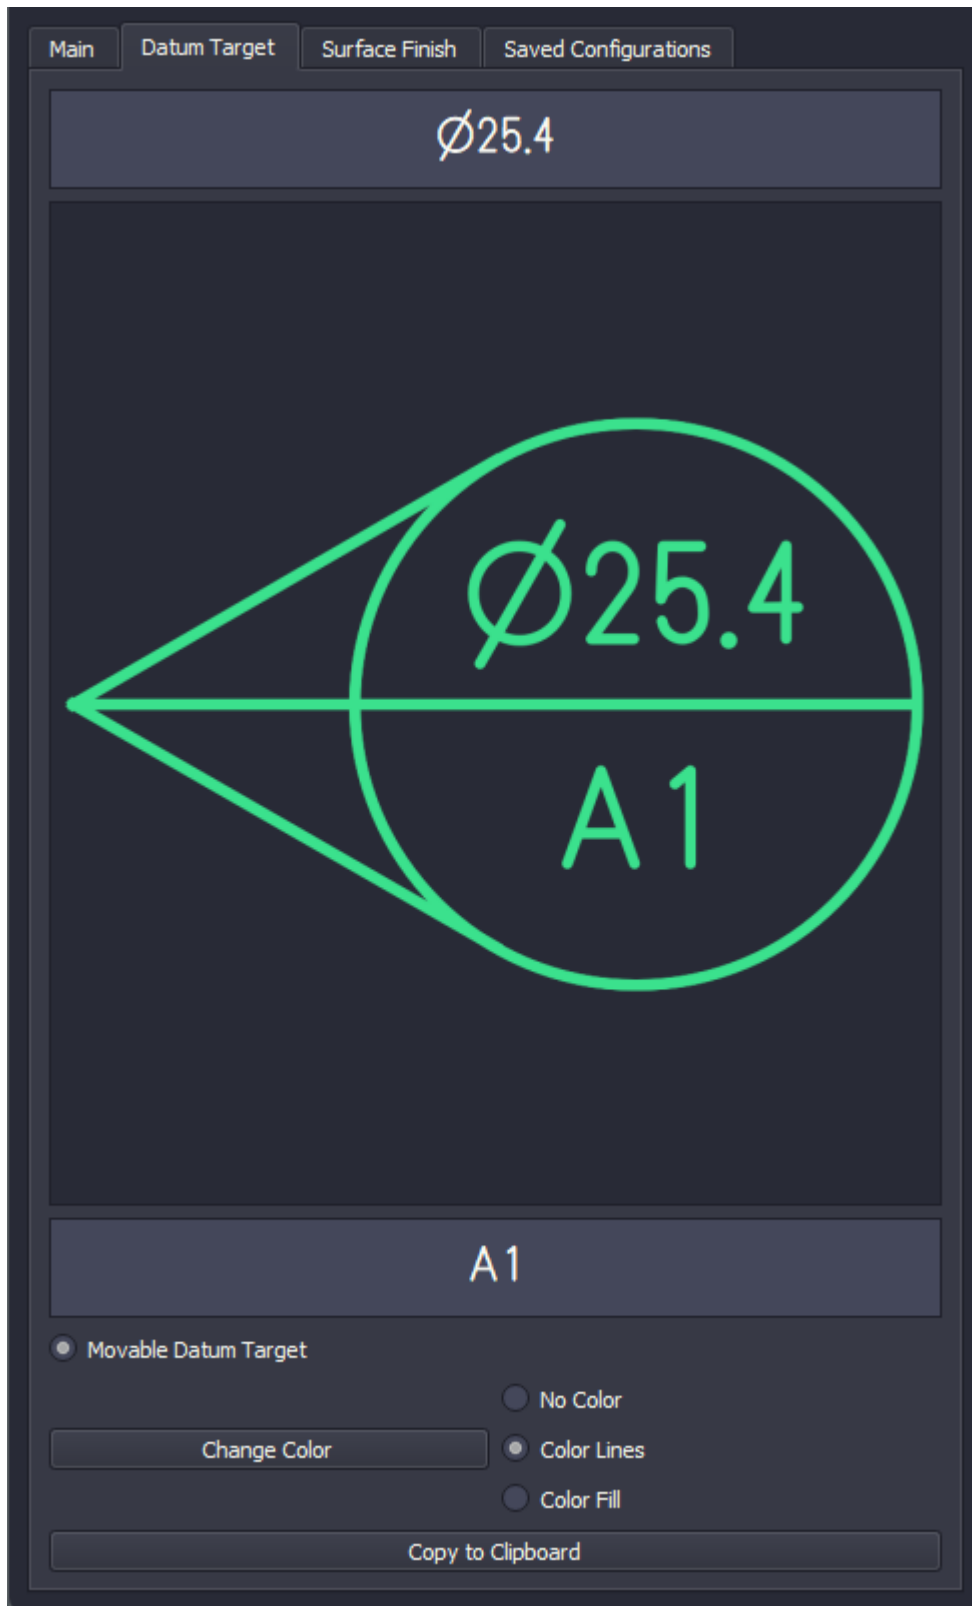

The Datum Target tab provides specialized tools for creating datum target symbols:

- Movable/Fixed datum target options
- Text placement in multiple positions

6 / 37

- Color controls specific to datum targets
- Preview with zoom functionality

Surface Finish Tab

The Surface Finish tab offers tools for creating surface finish symbols:

- Three end style options (Basic, Material Removal, Material Removal Prohibited)
- Multiple text input fields for comprehensive annotations
- Lay symbols for surface characteristics
- Preview with zoom functionality

Surface Finish configuration window showing input fields and a preview.

Input

- Radio buttons for surface finish symbols.
- Input fields: 0.8 , GRIND, $2.5/R_Z_{14.0}$.
- Buttons: Enter Text, d , P, C, M, R, X, \perp , =.

Preview

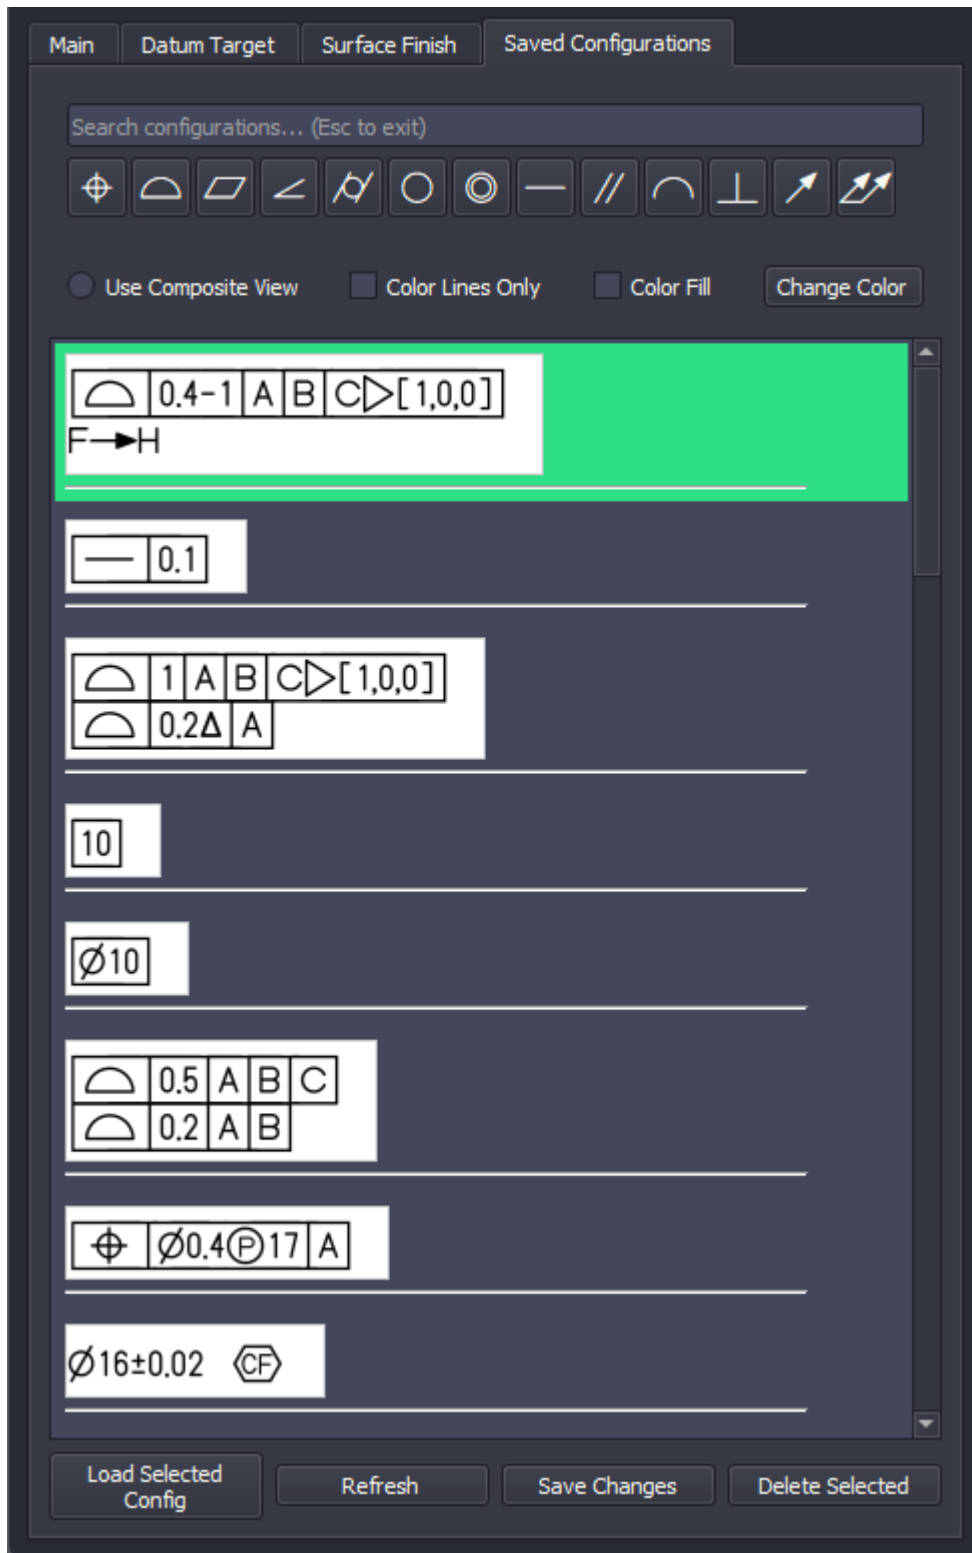

Preview of the surface finish symbol and text: GRIND, 0.8 , $2.5/R_Z_{4.0}$.

Buttons: Change Color, No Color, Color Lines, Color Fill, Copy to Clipboard.

Saved Configurations Tab

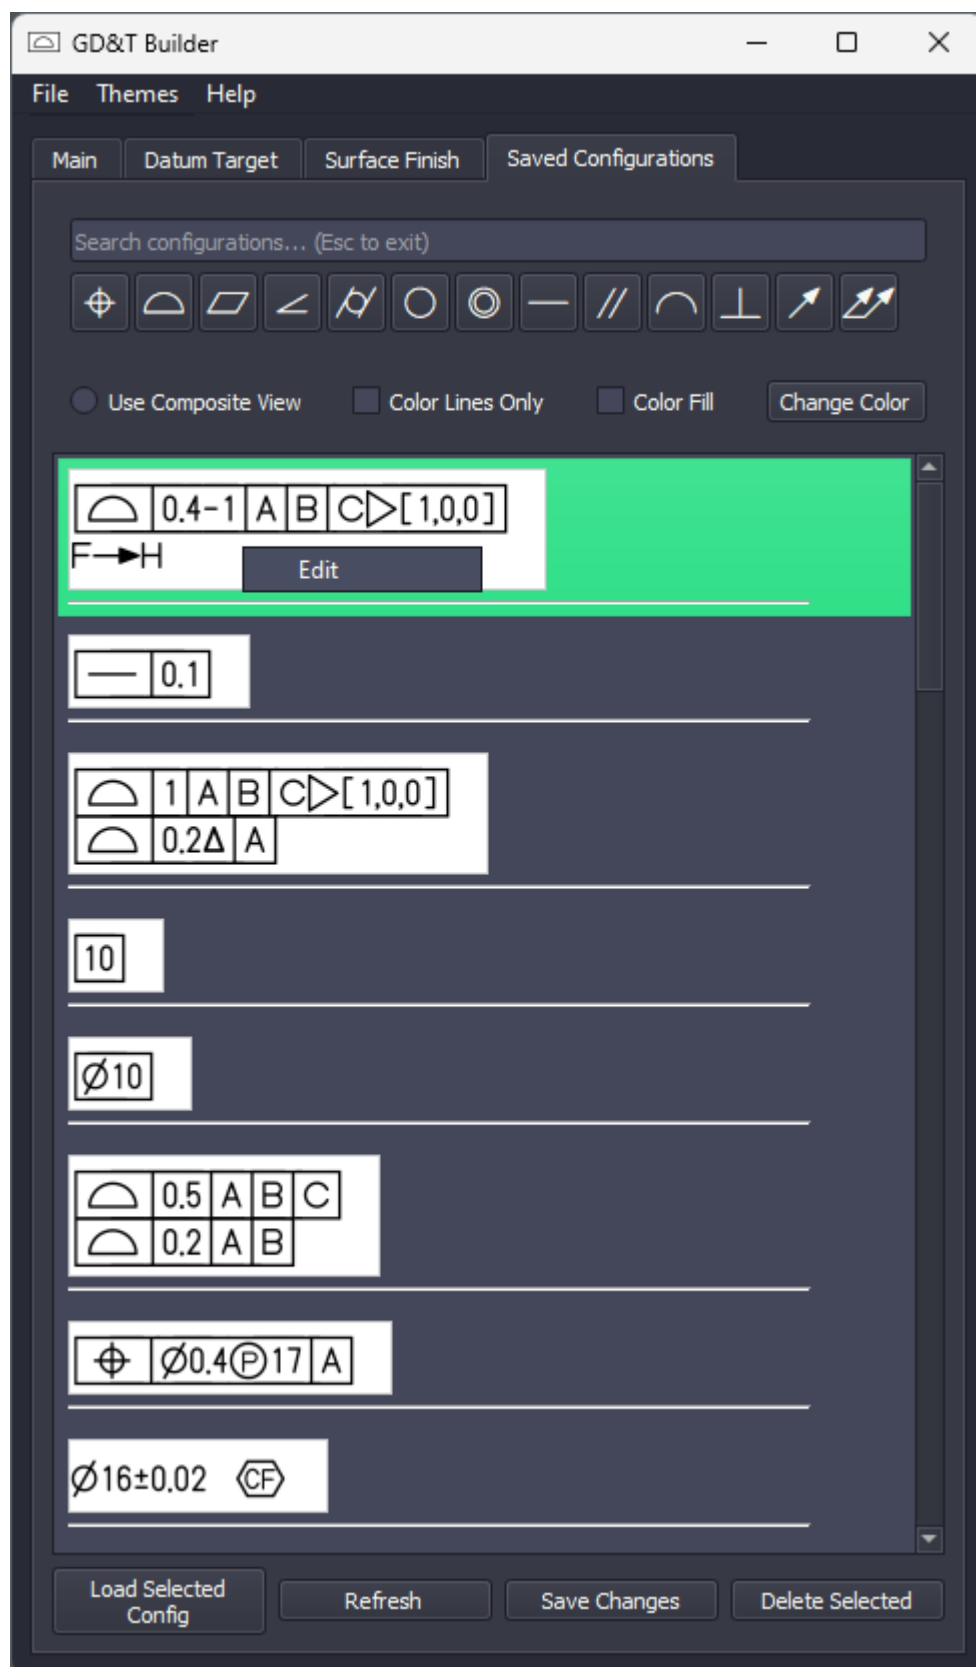

The Saved Configurations tab serves as a library for your GD&T configurations:

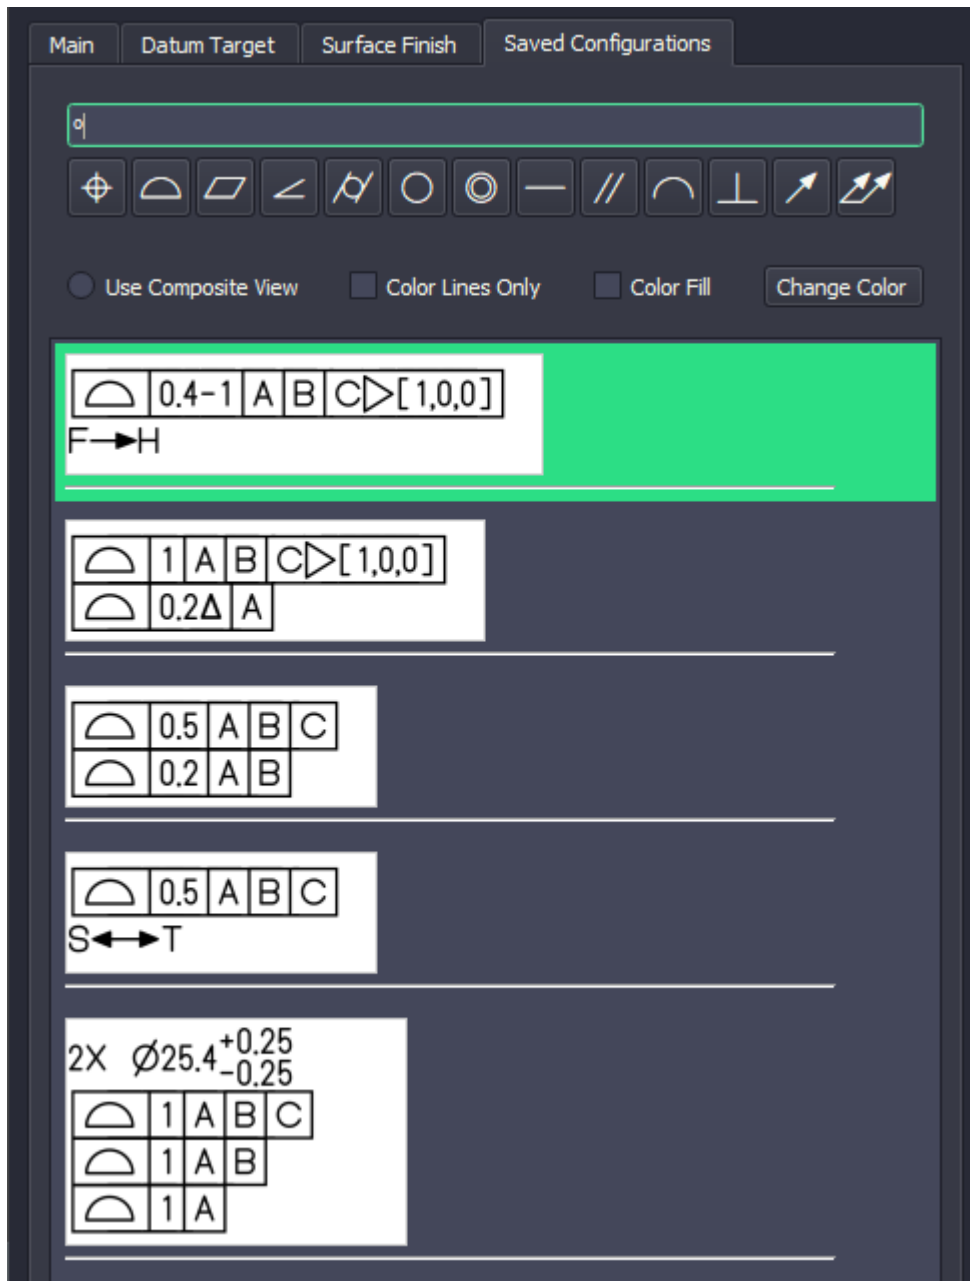

- Save frequently used configurations
- Edit existing configurations
- Preview all saved configurations
- Search and filter capabilities
- Copy configurations as images or keymap text

Managing Configurations

1. Right-click to edit any configuration
2. Double-click to copy to clipboard
3. Use search box to filter configurations
4. Use keyboard shortcuts for quick actions

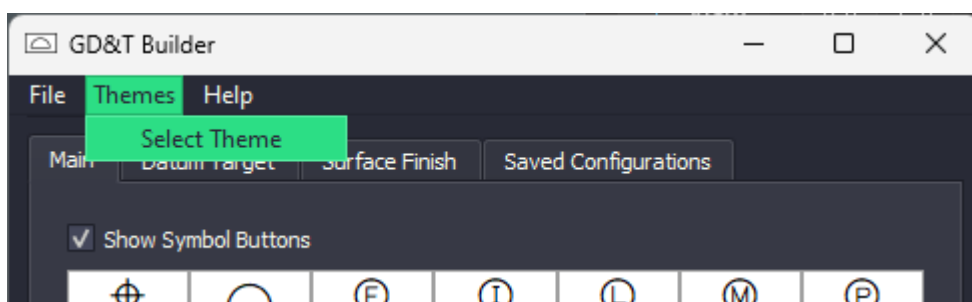

Theme Customization

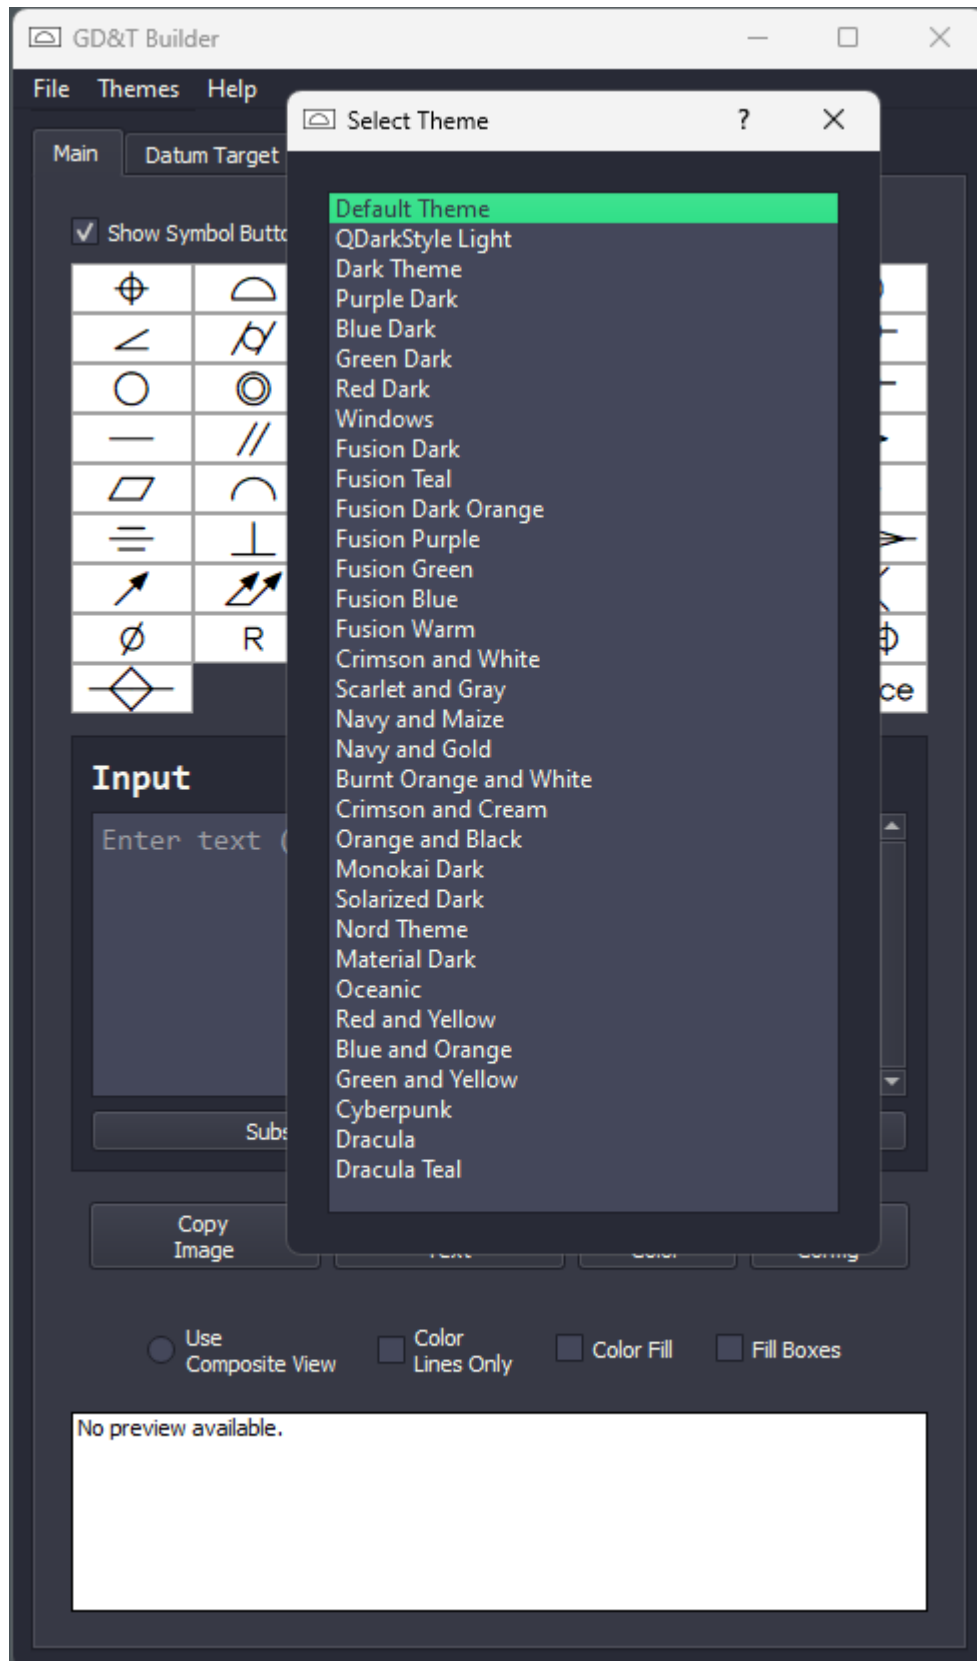

GD&T Builder offers extensive theme customization:

- Multiple built-in themes
- Dark and light mode options
- Custom color schemes

Theme Categories

- Default Themes
- Dark Themes
- Professional Themes
- Custom Themes

Keyboard Shortcuts

GD&T Builder provides comprehensive keyboard shortcuts for efficient workflow:

Global Shortcuts

GUI Shortcuts		
Shortcut	Action	Tab
Global Shortcuts		
Ctrl+1	Switch to Main tab	All
Ctrl+2	Switch to Datum Target tab	All
Ctrl+3	Switch to Surface Finish tab	All
Ctrl+4	Switch to Saved Configurations tab	All
Ctrl++	Zoom In GUI	All
Ctrl+-	Zoom Out GUI	All
Ctrl+0	Reset GUI Zoom	All

Main Tab Shortcuts

Main Tab		
Ctrl+A	Copy Image	Main
Ctrl+B	Show Symbol Buttons toggle	Main
Ctrl+S	Copy Text	Main
Ctrl+D	Change Color	Main
Ctrl+F	Save Configuration	Main
Ctrl+C	Use Composite View	Main
Ctrl+5	Color Lines Only	Main
Ctrl+T	Place Cursor Back to Input Window	Main
Ctrl+6	Color Fill	Main
Ctrl+7	Fill Boxes	Main

Datum Target Tab Shortcuts

Datum Target Tab		
Ctrl+A	Copy Image	Datum Target
Ctrl+D	Change Color	Datum Target
Ctrl+M	Moveable Target	Datum Target
Ctrl+N	No Color	Datum Target
Ctrl+8	Color Lines	Datum Target
Ctrl+9	Color Fill	Datum Target

Surface Finish Tab Shortcuts

Surface Finish Tab		
Ctrl+A	Basic End Style	Surface Finish
Ctrl+S	Material Removal End Style	Surface Finish
Ctrl+D	Material Removal Prohibited End Style	Surface Finish
Ctrl+P	Preview Toggle ►/▼	Surface Finish
Ctrl+F	Copy Image	Surface Finish
Ctrl+G	Change Color	Surface Finish
Ctrl+Z	No Color	Surface Finish
Ctrl+X	Color Lines	Surface Finish
Ctrl+C	Color Fill	Surface Finish

Saved Configurations Tab Shortcuts

Saved Configurations Tab		
Right Click	Edit	Saved Configurations
Double Click on Image	Copy Image to Clipboard	Saved Configurations
Left Click, Ctrl+C	Copy Image to Clipboard	Saved Configurations
Left Click, Ctrl+Shift+C	Copy Keymap Text	Saved Configurations
Left Click, Ctrl+L	Load Selected Config to Main Tab	Saved Configurations
Left Click, Del	Delete Selected Configuration	Saved Configurations
Ctrl+Mousewheel	Change Zoom Level	Saved Configurations
Type shortcuts (e.g., 'pos')	Insert Symbols in Search Box	Saved Configurations
Ctrl+V	Composite View	Saved Configurations
Ctrl+B	Color Lines Only	Saved Configurations
Ctrl+F	Color Fill	Saved Configurations
Ctrl+D	Change Color	Saved Configurations
Ctrl+R	Refresh Configurations List	Saved Configurations
Ctrl+S	Save Changes	Saved Configurations

Tips and Tricks

Efficient Symbol Input

- Use keyboard shortcuts for common symbols
- Learn symbol shortcut patterns
- Use the symbol button grid for reference

Working with Configurations

- Save frequently used configurations
- Use search to quickly find configurations
- Organize similar configurations together

Performance Optimization

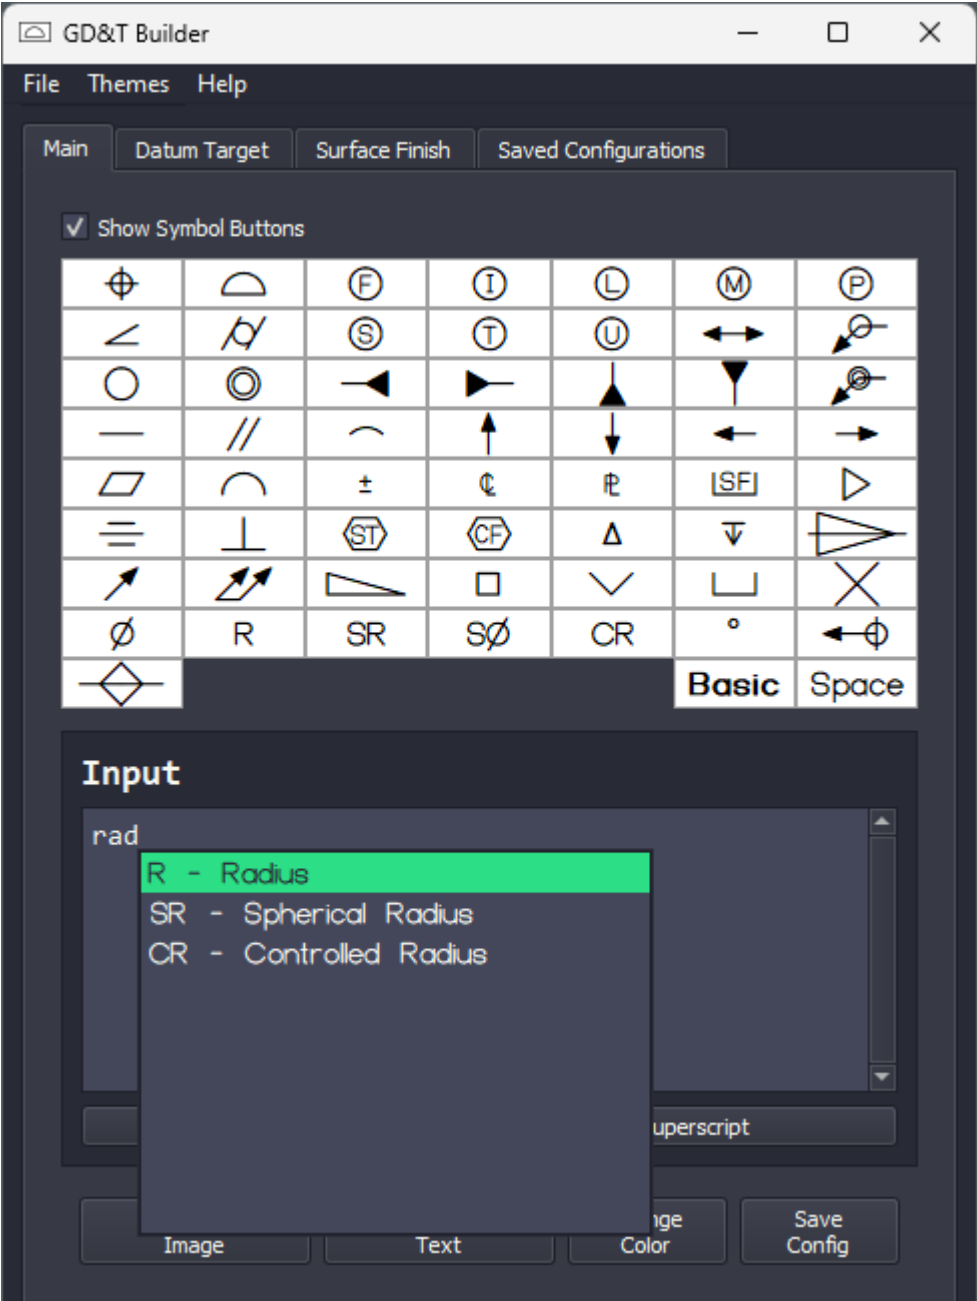

- Use appropriate zoom levels

- Manage saved configurations regularly
- Utilize keyboard shortcuts for faster workflow

Advanced Features

Symbol Shortcuts

The application supports text shortcuts for quick symbol insertion:

Input Shortcuts		
Shortcut	Name	Symbol
pro	Surface Profile	
	Profile of a Line	
	Projected	
pos	Position	
per	Perpendicularity	
par	Parallelism	
	Parting Line	
dia	Diameter	
	Spherical Diameter	
cou	Countersink	
	Counterbore	
dep	Depth	
bas	Basic	Basic
run	Runout	
	Total Runout	
ang	Angularity	
cir	Circularity	

str	Straightness	
fla	Flatness	
cyl	Cylindricity	
sym	Symmetry	
deg	Degree	
rad	Radius	R
	Spherical Radius	SR
	Controlled Radius	CR
dyn	Dynamic Profile Tolerance Modifier	
bet	Between Indicator	
tra	Translation	
slo	Slope	
tap	Conical Taper	
arc	Arc Length	
sqr	Square	
plu	Plus-Minus	\pm
sta	Statistical Tolerance	
con	Continuous Feature	
	Concentricity	

fre	Free State	Ⓕ
ind	Independency	Ⓘ
lmc	Least Material Condition	Ⓛ
mmc	Maximum Material Condition	Ⓜ
rfs	RFS	Ⓢ
tan	Tangent Plane	Ⓣ
uni	Unilateral	Ⓤ
all	All Around	
	All Over	
ori	Origin	

spa	Space	- 1/8 Space

☒ Use Composite View ☐ Color Lines Only ☐ Color Fill ☐ Fill Boxes

	.040	A
	.020	A

- Finish the 3rd and 4th rows Input as how you would normally enter them. As a side note, any text you want to place outside the boxes needs to be enclosed by quotation marks. The input of the 3rd row would look like this: ° ë.010 "4X".

Input

YóPçë._.0_4_0_|A}
äôâçë._.0_2_0_|A}
° ë.010 "4X"
. ë.005

Subscript Superscript

- You should now see the picture below.

	.040	A
	.020	A
	.010	4X
	.005	

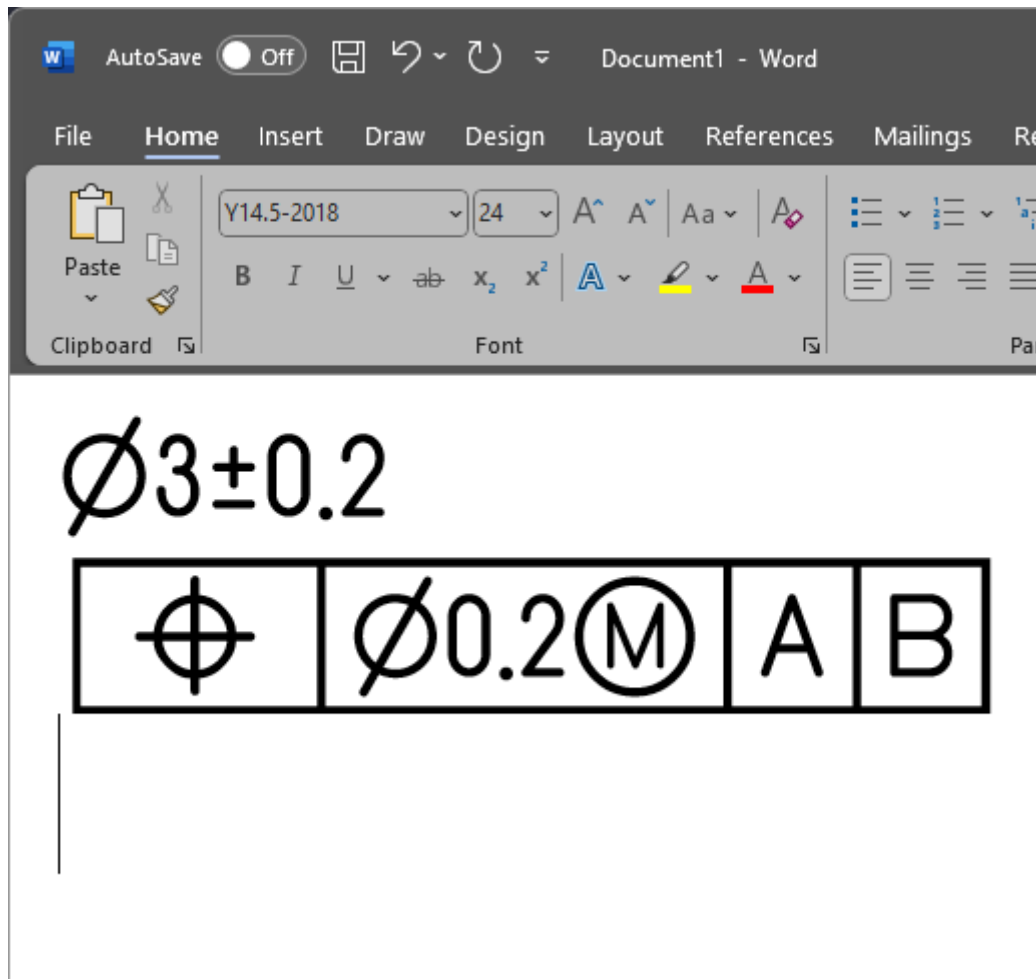

Import/Export

- Save configurations for future use
- Export as images with transparency

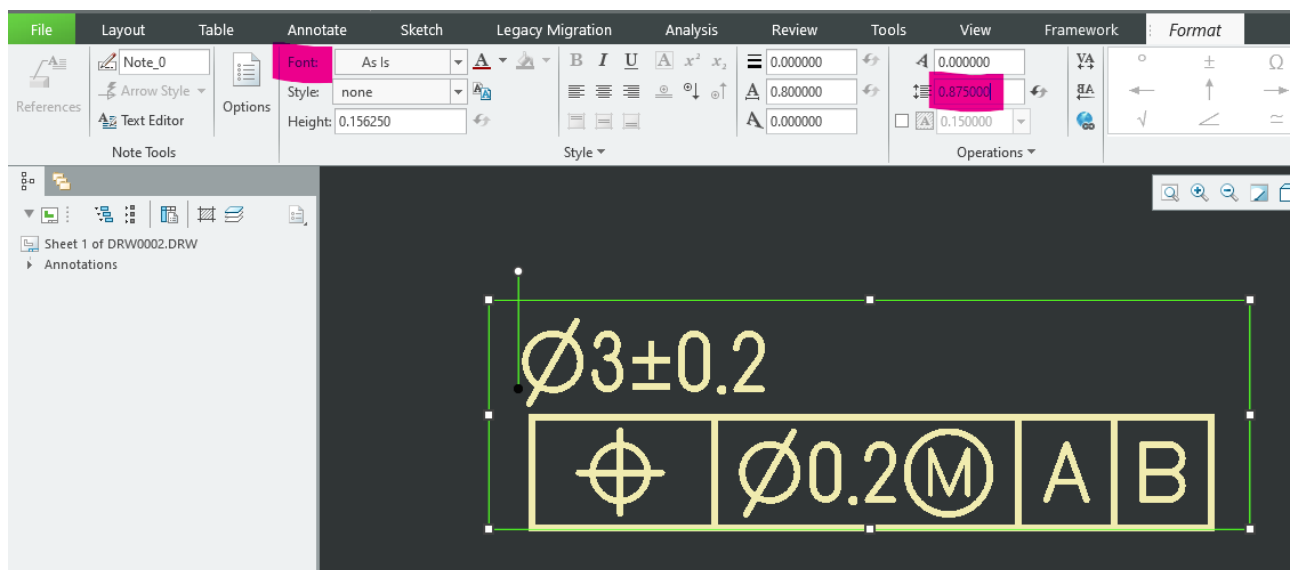

- Copy keymap text for CAD systems and/or other software environments (works with PTC Creo)

In the app, you would create the symbol and click on the Copy Text button. In Microsoft Word for instance, once you choose the font "Y14.5-2018", it will look like this:

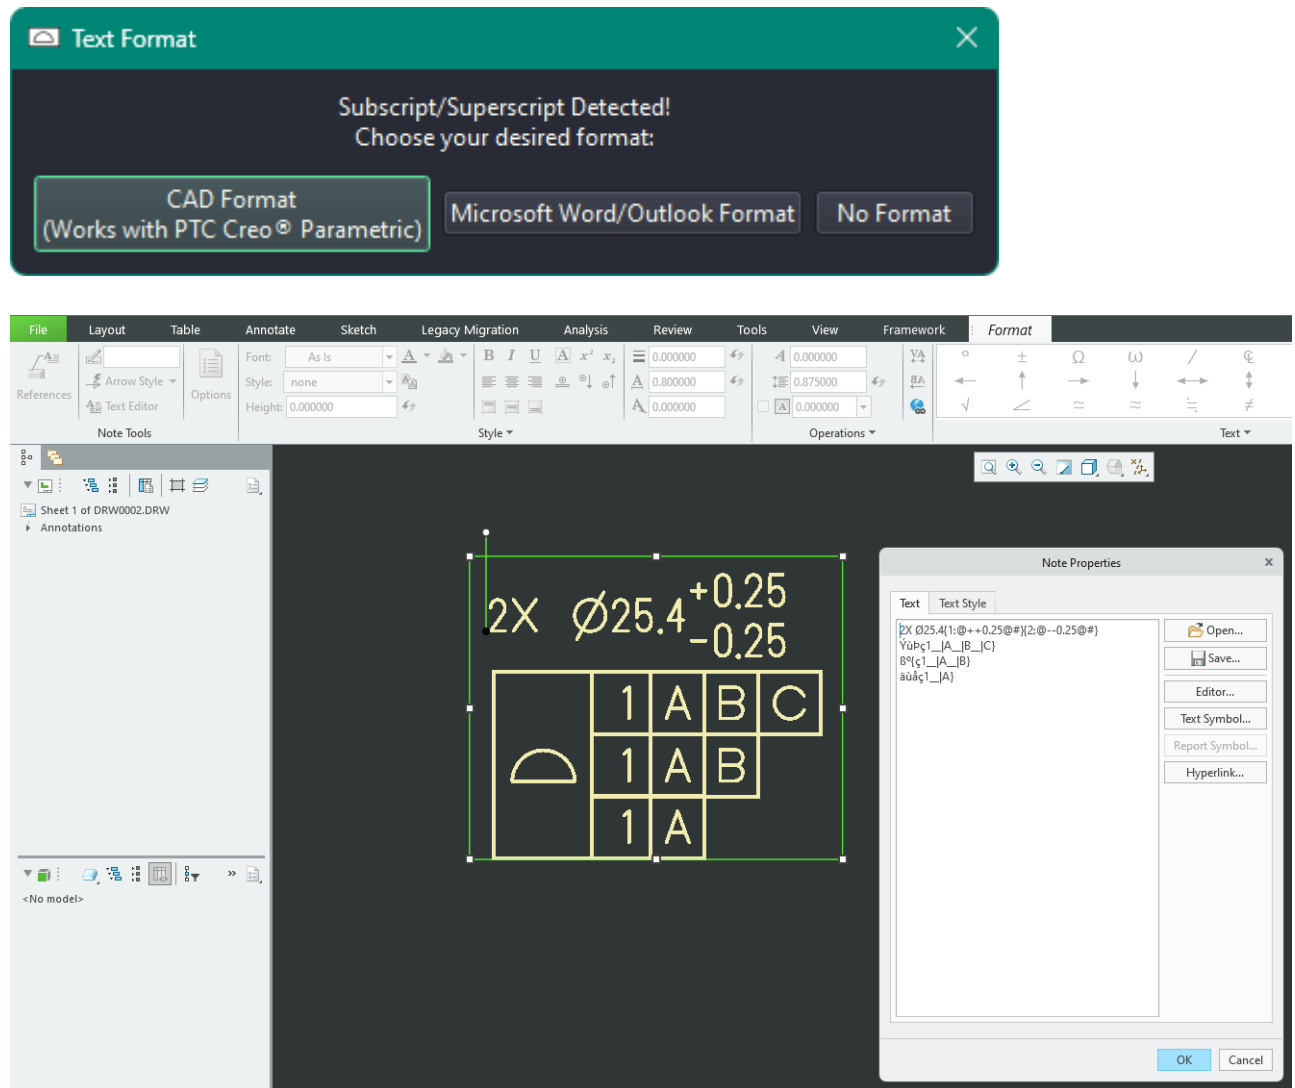

In PTC Creo for instance, you would store the font file "Y14.5-2018_mod_v3.ttf" within the folder that stores the fonts for your CAD software, such as C:\Program Files\PTC\Creo11\Creo 11.0.0.0\Common Files\text\fonts

After placing the text in your drawing and picking the Y14.5-2018 font, make sure you set the line spacing to 0.875

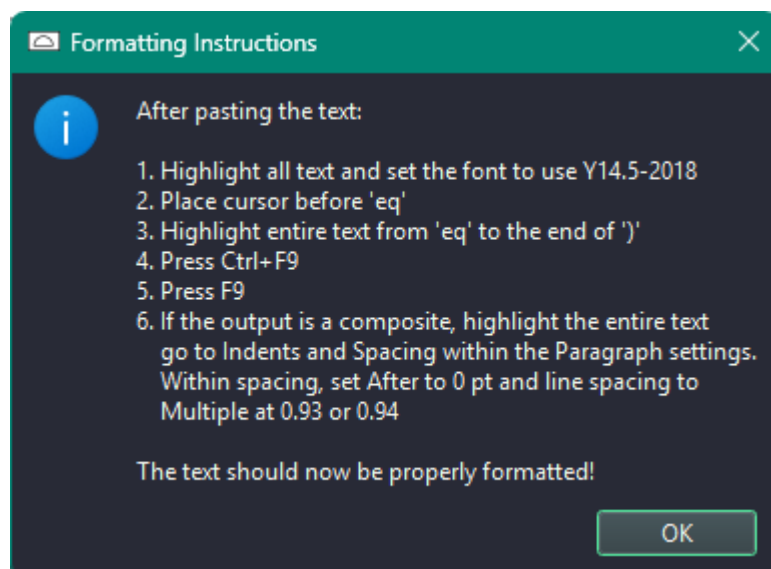

Also, if you have subscript and/or superscript and you want to put it in your drawing, this app can support that also. It can also handle composites. If it detects a subscript and/or superscript, a message will popup

once you click on the Copy Text button. Currently, the subscript/superscript conversion is working in Creo Parametric and also within Microsoft Word/Outlook.

If you pick the Microsoft Word/Outlook option, another popup will show and give you further instructions in showing the copy text with the subscript/superscript properly.
